

Company Profile

<https://opensource-db.com>

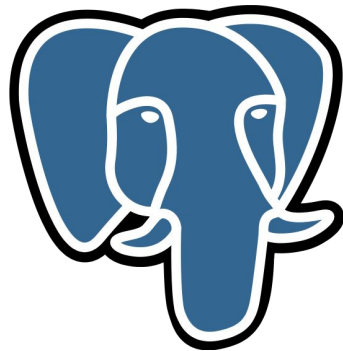

Our Mission - Building for NextGen

<https://opensource-db.com>

OpenSource DB empowers organizations to **build, operate, and scale mission-critical** applications on AI-native, open-source PostgreSQL, without vendor lock-in. We pair **industry-proven tools and agentic AI** with the expertise of passionate engineers to deliver **secure, sovereign, and high-performing** data infrastructure **across geographies**.

Who We Are

<https://opensource-db.com>

OpenSource DB is a PostgreSQL-focused technology company delivering consulting, implementation, and enterprise-ready open-source database solutions.

Our Credentials:

ISO 27001:2013 certified	DPIIT-recognized startup
Member of FICCI	Member of IETO
Partnered with IIT-M & IIT-B	Incubated in JTBI

How We Work With You

<https://opensource-db.com>

Design • Deploy • Scale • Secure | Databases Across Geographies

Strengthen
Security

Maximize
Availability

Ensure
Reliability

Minimize
Time & Cost

ENSURE RELIABILITY & UPTIME

Enterprise Postgres Support

24/7 production support with guaranteed SLAs, incident response, tuning, and proactive health checks.

MINIMIZE TIME & COST

Migration to PostgreSQL

End-to-end migration from Oracle, SQL Server, MySQL, or Sybase, near-zero downtime cutover.

SECURE, INTELLIGENT DATA

Postgres + AI

Secure vector search, embeddings, and RAG pipelines built directly into your existing database.

Why OpenSource DB?

1 Community-Driven Expertise

Active PostgreSQL contributors and community leaders, we help shape Postgres, not just use it.

2 Proven Methodology

A structured path: Assessment to production; with Runbooks & Knowledge transfer

3 Cloud-Agnostic by Design

Runs on AWS, Azure, GCP, or on-premise, portable solutions that avoid vendor lock-in.

Our Three Postgres + AI Products

<https://opensource-db.com>

All three build on standard, open-source PostgreSQL, no proprietary database, no lock-in, and your data never has to leave your infrastructure.

OSDBstore

Smart storage that pays for itself

Your database automatically moves data you rarely use to cheaper storage, and keeps the data you use often fast and close at hand.

- Built on proven, open-source technology, not a risky rewrite
- Dashboards and setup wizards so any IT team can run it
- Built-in AI advisor recommends the best storage settings for you

OSDBAgenticAI

Let AI assistants use your data, safely

Turns your existing database into something AI tools (like Claude Code or Copilot) can search and answer questions from, in plain English, with no coding required.

- Secure, controlled access, AI only sees what it's allowed to
- Finds relevant information the way a search engine does
- Works with your current database; nothing to migrate

OSDBcortex

An AI co-pilot that watches your database 24/7

Continuously monitors database health, catches problems early, and explains what's wrong in plain language, instead of just raising an alarm.

- Spots issues other tools miss, using multiple detection methods
- Runs entirely on your own infrastructure, nothing sent offsite
- Works with any modern Postgres database, cloud or on-prem

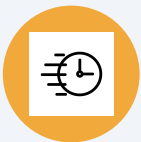

Forward Deployed Engineers

Our experts embed directly with your team, driving the migration, building your people's PostgreSQL capability, and staying for the operate phase. A yearly contract to start, designed to scale.

Embedded, not arm's-length

Engineers work alongside your teams, with knowledge transfer built in.

Faster & de-risked

Specialist hands keep the migration moving and surprises to a minimum.

Flexible & scalable

On-site or remote, scaling FDE capacity up as the estate grows.

Exclusive Distributors Of

Product offerings

- 01 | DB Optimization As A Service with AI Agents
- 02 | Fully-Distributed Active-Active Postgres
- 03 | Postgres EE - Next-Gen DB Security - TDE
- 04 | Enterprise Cloud CSP and OSS Savvy
- 05 | AI-ready Open Source Data Platform
- 06 | AI-enabled Oracle Migration to Postgres

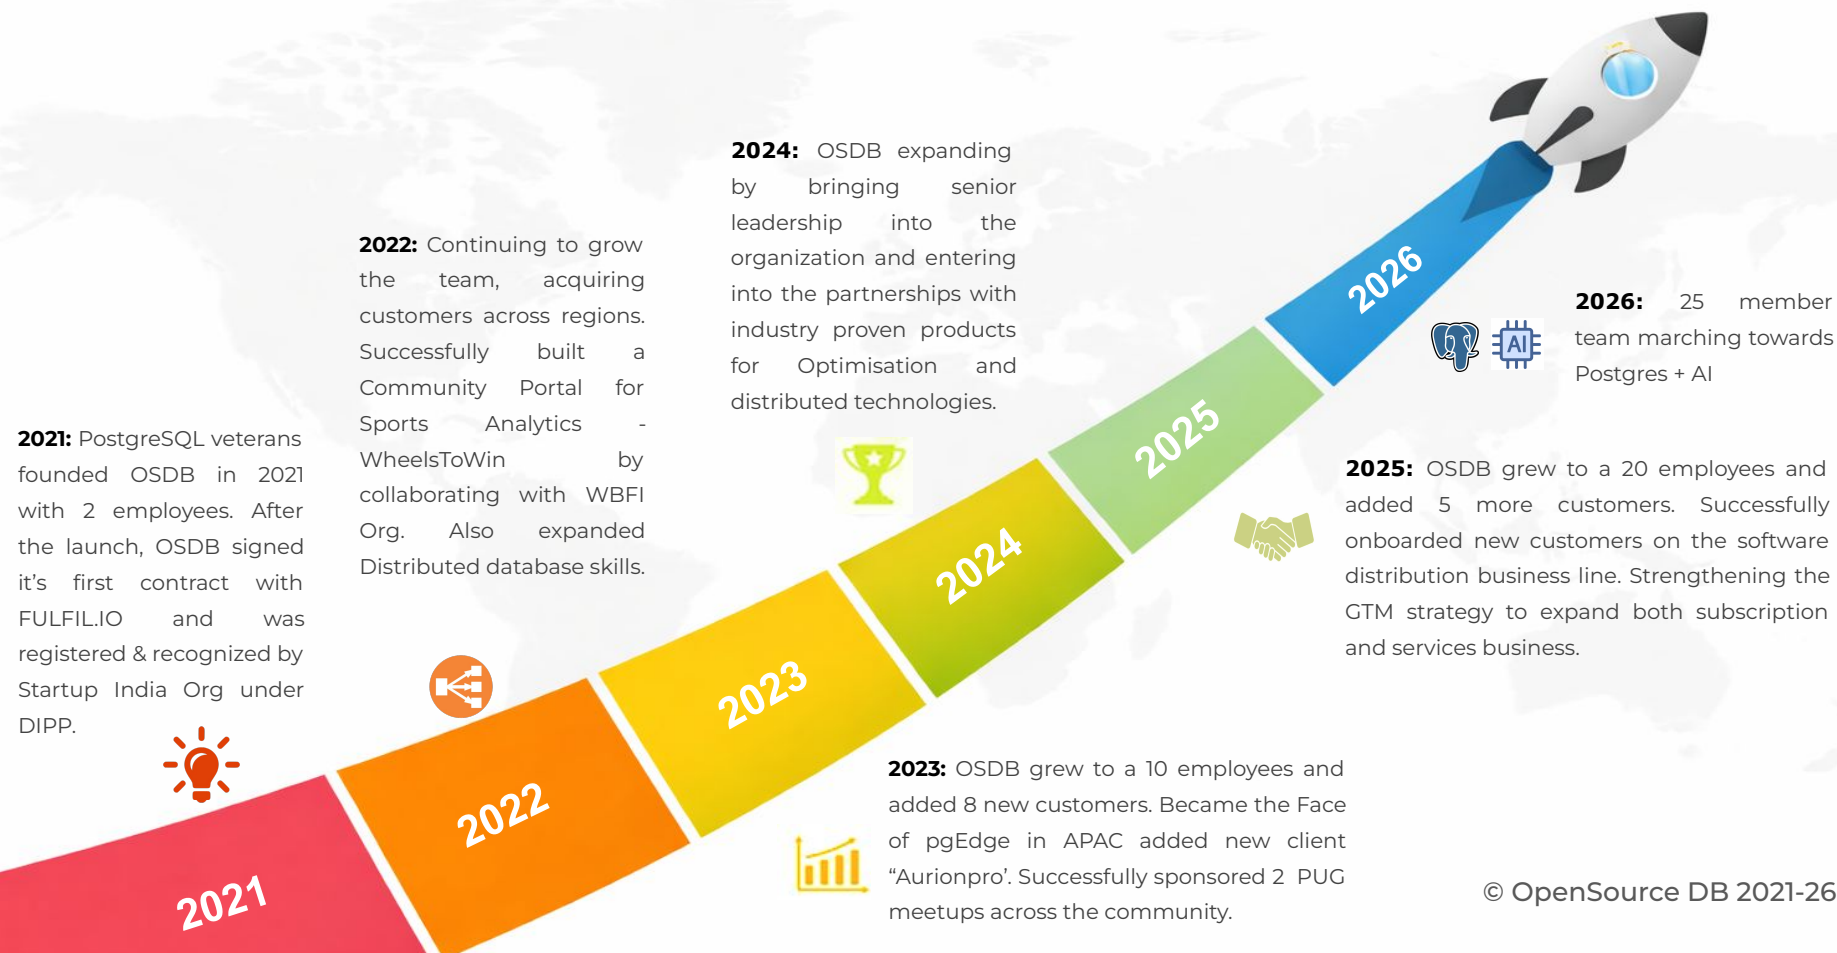

Service offerings

- 01 | Customized Professional Services
- 02 | One-stop solution for all PostgreSQL needs
- 03 | Cloud Modernisation and Migration Specialists
- 04 | Exclusive Distribution and Sales Enablement
- 05 | Continuous Improvement Through AI Integration
- 06 | Design & Deploy hyper-converged databases

Our Growth

<https://opensource-db.com>

OpenSource DB + Aiven <https://aiven.ai/>

Together, we bridge hands-on PostgreSQL consulting and community leadership with the reliability, automation, and flexibility of Aiven's cloud-native platform. Delivering a powerful solution for enterprises looking to modernize their data stack without compromising control or performance.

Aiven provides:

- Production-ready PostgreSQL with 99.99% uptime SLA.
- Seamless provisioning across AWS, GCP, Azure, and more.
- Fully managed services: backups, monitoring, upgrades, high availability.
- Reduces cloud lock-in while boosting Postgres operational maturity.
- Brings AI-backed tuning, observability, and resilience to Postgres environments.
- Empowers customers with choice, control, and community support.

PARTNER

OpenSource DB + CYBERTEC <https://cybertec-postgresql.com/en/>

With the collaboration with CYBERTEC, we are bringing the deeper community expertise and stronger force for us to support our expanding customer base across geographies with end to end solutions and variety of options for our customers.

CYBERTEC provides:

- Expertise in PostgreSQL Consulting and Services
- Comprehensive Training and Workshops
- Customized Database Solutions
- Advanced Tools and Security deployment
- Global Reach and Experience
- 24/7 Support and Maintenance:
- Focus on Open Source
- Strong Partnerships and Collaborations

+

OpenSource DB + DBtune <https://dbtune.com/>

By partnering with DBtune, OpenSource DB is set to deliver intelligent, AI-driven database optimization, empowering our customers with operational excellence and reinforcing our leadership in Postgres performance services.

DBtune provides:

- Specialized Database Performance Tuning
- User-Friendly Interface
- Real-Time Monitoring and Alerts
- Customizable Tuning Recommendations
- Extensive Reporting and Analytics
- Integration with DevOps Tools
- Cost-Effective Solution

+

OpenSource DB + DigitalOcean <https://digitalocean.com/>

As a proud partner of DigitalOcean Cloud Solution Provider, we combine the reliability of PostgreSQL with the scalability of cloud infrastructure to offer seamless database management, optimization, and support. Enhancing performance, and driving open-source adoption for businesses of all sizes.

Following are some of the DO Services we use:

- **Droplets:** Scalable virtual machines for hosting PostgreSQL databases.
- **Managed Databases:** Fully managed PostgreSQL with automated backups and high availability.
- **Kubernetes:** Container orchestration for scalable PostgreSQL deployments.
- **Storage:** Scalable object storage for backups and logs.
- **Load Balancers:** Distribute traffic across PostgreSQL instances for high availability.

+

OpenSource DB + HexaCluster

<https://hexacluster.ai/>

HexaCluster helps organizations' legacy transformation and Oracle-to-PostgreSQL migration. It complements OpenSource DB's PostgreSQL expertise by enabling enterprises to move away from proprietary database systems and adopt modern, scalable architectures. Together, we help organizations reduce licensing costs and accelerate their journey toward open, cloud-ready data platforms.

- **Oracle to PostgreSQL Migration:** Enabling smooth and efficient migration from proprietary databases.
- **Open-Source Transformation:** Helping enterprises adopt scalable PostgreSQL-based architectures.
- **Joint Expertise with OpenSource DB:** Combined strengths in migration, modernization, and PostgreSQL operations.

+

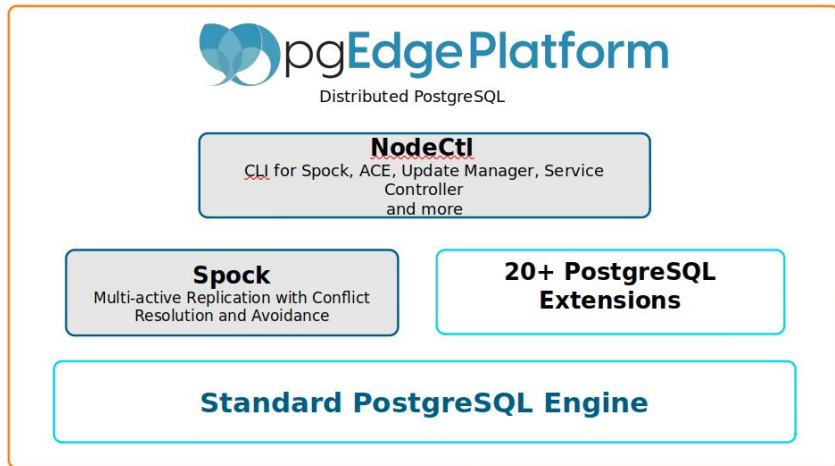

HEXA^{DB}CLUSTER

OpenSource DB + pgEdge <https://pgedge.com>

With this collaboration, we added **much-awaited features** to our services.

- 01 | Multi-Master & Multi-Active Replication
- 02 | Ultra-High Availability
- 03 | Low Latency & Data Residency

+
